NEW FEATURES

1. Add "Invert Connection Direction" feature to reverse source and target ends of a connection
2. New Model Tree alphanumeric sort algorithm
3. Show parent folder paths in "Used in Views" and "Model Relations" analysis tables
4. Open Exchange Format now imports and exports Specialization names

INVERT CONNECTION DIRECTION

- The original relationship should have valid inverse relationship per ArchiMate specification
- The Name is required manually adjustment
- The relationship codes are always inside the Source view element block

IMPROVEMENTS

1. Model Tree alphanumeric sort preference is **off by default**
2. Model Tree search - **restore tree selection** when clearing search filter and text
3. [**CSV Import**] Throw an exception if there are duplicate relations declared
4. Aggregation and Composition connection ends are drawn **more accurately**
5. Ensure icon images are not drawn slightly outside of a figure
6. Add an internal check on startup to ensure workbench part icons are correct when using different versions of Eclipse
7. Remove link in help contents to online ArchiMate 3.2 specification as it's no longer "open"

FIXES

1. Fix disabling themes in preferences setting not working
